# Salesforce CRM Basics ■

## 1. What is CRM?

CRM (Customer Relationship Management) is a system used by companies to manage customer data, track interactions, improve relationships, and increase sales efficiency. It helps businesses organize customer information in one place.

## 2. Why Companies Use Salesforce?

• Manage customer relationships effectively
• Track sales and business growth
• Automate business processes
• Improve customer support
• Store customer data securely
• Generate reports and dashboards
• Increase team productivity

## 3. Salesforce Core Objects

**Account:** Represents a company or organization.

**Contact:** Represents a person associated with an Account.

**Opportunity:** Represents a potential sales deal or business opportunity.

## 4. Real-World Mapping ■

| Real World | Salesforce Object |
|---|---|
| Company/Organization | Account |
| Person working in company | Contact |
| Business Deal/Sales | Opportunity |

**Example Scenario:**
• Account: ABC Technologies
• Contact: Rahul Sharma (Manager)
• Opportunity: CRM Software Purchase Deal
